Kansas Nursing Homes with Three Years of Poor Inspection Trends

Each year Kansas Advocates for Better Care (KABC) provides citizens a listing of Kansas nursing facilities/homes cited with 10 or more deficiencies for each of the facility’s three most recent inspections.

The average number of deficiencies cited in nursing homes nationally is 6.8 while the average in Kansas is 9.5. A deficiency is cited when a nursing facility is non-compliant with federal and/or state regulations which are in place to provide for the health and safety of persons receiving care in nursing facilities. State survey/inspection teams are made up of specially trained, licensed nurses who conduct inspections in every nursing facility annually, and in addition when complaints are reported. The number of deficiencies cited in a single Kansas nursing home during the most recent inspection period range from 0 to 59.

78 Kansas nursing homes were cited with 10 deficiencies or more in the three most recent annual inspections. These nursing facilities, the town where located and the total number of deficiencies cited by the Kansas Department for Aging and Disability Services during the most recent survey inspection are in the list below.

18 of the facilities listed are not-for-profit corporations, 60 are for-profit corporations. Facilities listed in bold face type in this document have been cited during their most recent inspection survey for actual harm of a resident(s), immediate jeopardy of resident(s), and/or deficiencies that are classified by the federal Centers for Medicare and Medicaid Services (CMS) as mistreatment of adult resident(s). Nursing facilities marked with a double asterisk (**) have been designated as a Special Focus Facility (SFF) by the Center for Medicare & Medicaid Services (CMS). Special Focus Facility designation is assigned to a nursing home which is consistently non-compliant with state and federal regulations. As a result a Special Focus Facility receives increased and more frequent oversight from CMS and the state’s survey unit for the purpose of correcting performance problems, deficient practices, and to assure the health and safety of residents in the facility. In addition to greater oversight, a Special Focus Facility is subject to Civil Monetary Penalties for lack of compliance with federal and state regulations.

By federal mandate the average length of time between survey inspections in all Kansas nursing homes is 12 months; and the frequency of inspection surveys at any given licensed facility must occur at least every 15 months. Nursing home inspections are mandated by federal law to ensure that frail elders and vulnerable adults who live in nursing homes are provided care according to standards set by state and federal laws and regulations. Survey inspection teams are made up of nurses employed by the Kansas Department for Aging and Disability Services (KDADS). There are currently 343 licensed nursing homes in Kansas.

Kansas Advocates for Better Care (KABC) encourages consumers to look at a number of factors when evaluating a nursing facility as a place to live and receive care. Annual
inspection survey results are one of those factors. If you have questions or would like help to better evaluate long-term care placements or services, please call KABC toll-free: 800-525-1782. KABC is a 501 c 3 non-profit. Our mission since 1975 is “Advocating for Quality Long-Term Care” for older adults and adults with disabilities. KABC can provide consumers with information and assistance regarding long term care needs in nursing facilities, assisted type living facilities and services in the home. For more than 38 years KABC has served Kansas citizens by:

- Advocating on behalf of consumers for increased quality in long-term care options that include nursing homes, assisted living, home plus, and in-home care provided through home and community-based services (HCBS),
- Providing guidance, education and advocacy for consumers seeking long-term care placement and services,
- Providing education or training to family caregivers and long-term care providers, and
- Encouraging long-term care providers to adopt the “person-centered care” model of delivering long-term care services.

KABC supports raising the minimum nursing staffing hours in Kansas nursing homes from 2 hours per resident per day to the 4+ hours per resident per day which reduce injury, illness and death and is a significant indicator for improving quality of life and care for elders in nursing homes.

If you, your family or a friend is in need of information about long-term care choices, please call for assistance, toll-free (outside of Lawrence): 800-525-1782, or 842-3088 (in Lawrence), email us at info@kabc.org or visit www.kabc.org

Inspection data was taken from the Kansas Department for Aging & Disability Services form 2567/Inspection deficiency statements, and is current as of November 25, 2013.
